次の英文を読んで、下記の問いに答えなさい。

(26点)

Have you ever used ChatGPT? It is a smart AI computer program that can understand and write text like a human. This program has studied many things on the internet, such as books, websites and various social media. You interact with ChatGPT by using prompts¹. A prompt is a sentence or a request to do something. For example, you might write, “Please write a short story for me that begins, ‘A long time ago, there was an old who lived in a small village’.” ChatGPT will then finish the story. (A) In the same way, ChatGPT can also write songs, translate from one language to another, and help with writing code or solving problems. It can even offer advice on what you should wear, or what to say when meeting people for the first time. So ChatGPT is very flexible.

Perhaps you have also heard of DALL-E or Midjourney². These AI programs can create pictures based on what you describe to them. 【without, about your prompts carefully, some amazing pictures, or drawing application, think, using a tablet, if, can generate, you, you.】. And perhaps even more amazing is an AI program made by GOOGLE that can make a short movie from just your text prompts. (B) The movies look extremely realistic, and are already being used by many people and advertising companies.

So, does this mean that AI programs are good for us and good for society? Unfortunately, there are some problems which we should think about. For example, if you have used ChatGPT, have you read the warning at the bottom of the screen? It says “ChatGPT can make mistakes. Check important info”. Even though it is a powerful tool, it should be used carefully. Our new future using AI tools and programs looks very exciting, but we should think very carefully about how and when we should use them.
